## 3-Axis Horizontal Research Anemometer

### Key Features

- Precision 3-axis sonic anemometer
- 50Hz Output Rate
- 0-45m/s wind speed,
- 0-359° wind direction
- U, V, W Vector Outputs
- Horizontal Head for Minimal Flow Disturbance
- Stainless steel construction

The HS-50™ horizontal-head anemometer has been designed for scientific research applications requiring accurate 3-axis wind speed and direction information.

This instrument utilises advanced ultrasonic measurement technology, with a unique horizontal head design that allows for more accurate measurement of vertical flows with minimal interruption from the anemometer geometry. The head features a built-in inclinometer for simple positioning of the instrument on a tower or mast. A separate electronic unit allows easy access to the PRT and 6 analogue inputs.

HS-50™ will monitor wind speeds of 0-45m/s, with a fast sampling rate of 50 Hz. The instrument can be positioned close to the ground or to crop and tree canopies for accurate measurement of surface turbulence.
